The Design2Innovate Program

The 'Design2Innovate' professional development series for teachers is designed to develop capabilities and to influence the integration of Design Thinking into teaching practice and school curriculum. Across Semester 1 in 2021 the program involved teachers' active participation in activities that were designed to be accessible and adaptable for them to take away as a toolkit to apply in their own contexts.

The presentation will explain how the Design2Innovate program enabled teachers to work collaboratively to design an integrated STEM unit for their own context.

Mim is dedicated to STEAM and Design Thinking. She is inspired by the scope of engaging learning opportunities possible in the context of STEAM with the structure of Design Thinking to promote interdisciplinary collaboration, creativity and communication.
