Code Fly Deliver - Entrepreneurial Unit of Work

CODE, FLY, DELIVER allows students to investigate the world of drone delivery, one of the fastest-growing industries as the world looks to instant or same-day delivery.

This STEM education unit of work covers a number of learning areas, Digital and Design Technologies, Literacy, HASS, Economics and Business, and walks the students through building an entrepreneurial business case, following the exact same steps, Australia's leading drone delivery business, Swoop Aero would follow to launch a new drone delivery network.

In this workshop, Paul will walk the participants through the program unit of work and provide them with some great tips and tricks for flying drones in classrooms. Each participant will be gifted the unit of work so they can start teaching as soon as they get back to the classroom.
